

It's not every day you come across an animal with an extra digit!

It's not every day you come across an animal with an extra digit!

1 year old beltex gimmer lamb recently presented with an extra toe ? also known as polydactyly

Xrays were taken here at our Goosnargh practice and Oakhill Farm Vet, Amy Bowers operated to remove the extra structure. Without removal, the lamb was a risk of it getting caught and sustaining trauma.] The lamb is now recovering well.
