

Injured cat found at local scrap yard

Two year old Bonnie was recently found with some serious injuries, under the bonnet of a scrap car at a local recycling plant. **Bonnie was brought to our Conway Drive surgery with a fractured tibia, broken canine tooth and some wounds around her face.**

Unfortunately Bonnie is not microchipped, so local charity, [Lancashire Cat Rescue](#), agreed to take her in.

The first stage of Bonnie's treatment was for our vets to repair Bonnie's leg with pins and an external frame to stabilise the fracture ? see images.

The next stage planned is to remove Bonnie's broken tooth when she has post op radiographs in 6 weeks time.

Bonnie is now recuperating with [Lancashire Cat Rescue](#).
